

## NOTICE

### DYNAMIC SCHEDULES LIMITS

Posted: December 28, 2005

Effective: January 4, 2006

Effective January 4, 2006, dynamic schedules will be limited to 300 MW in aggregate during 0600 to 2200 every day and 550 MW during 2200 to 0600 every day over the California-Oregon Intertie (COI) until TBL resolves the issues stated below. Some of these issues were discussed with the Transmission Customers during the Business Practice Technical Forum Conference Call on December 7, 2005.

1. Switching of reactive for voltage support lags need,
2. RAS arming lags requirement,
3. Adjustments required may lag when Internal paths exceed the OTC,
4. Contractual issues, and
5. Scheduling allocation issues.

Current users of dynamic schedules will be required to submit dynamic schedules during TBL's Firm Pre-Schedule window. TBL will not accept increases to dynamic schedules after the Pre-Schedule window is closed. If the total aggregated dynamic schedules capacity that is requested exceeds the available capacity limitations on the COI, TBL will apply a pro rata allocation to all dynamic schedules based on the requested amounts. TBL Pre-Schedule will contact Transmission Customers by telephone within an hour of the close of the California market to notify them of scheduling adjustments they must make to their requested dynamic schedules. Transmission Customers must then incorporate the adjustments into their schedules (dynamic schedule demand account) consistent with the applicable scheduling timelines. TBL will accept decreases to dynamic schedules during Real-Time.

TBL will continue to work with Transmission Customers holding firm transmission rights on the COI that are interested in obtaining dynamic scheduling rights and negotiating Dynamic Scheduling Operating Agreements consistent with TBL's Dynamic Scheduling Business Practice. However, until such time as TBL and its customers are able to resolve how available dynamic scheduling capability will be allocated among users, TBL will not accept dynamic schedules from new users.

TBL will continue to limit dynamic schedules over the Northern Intertie to 300 MW in aggregate consistent with the Dynamic Schedules Limits posting of August 22, 2005.

This Notice replaces the Dynamic Schedules Limits Notice posted on 08/22/2005.
